PubMed Abstract:
Deficiency of human erythrocyte isozyme (RPK) is, together with glucose-6-phosphate dehydrogenase deficiency, the most common cause of the nonspherocytic hemolytic anemia. To provide a molecular framework to the disease, we have solved the 2.7 A resolution crystal structure of human RPK in complex with fructose 1,6-bisphosphate, the allosteric activator, and phosphoglycolate, a substrate analogue, an...

This entry supersedes: 1LIX

- **Version 1.0: 2007-11-20**
  Type: Initial release
- **Version 1.1: 2011-07-13**
  Changes: Refinement description, Version format compliance
- **Version 1.2: 2019-11-20**
  Changes: Advisory, Derived calculations, Other
- **Version 1.3: 2020-07-29**
  Type: Remediation
  Reason: Carbohydrate remediation
  Changes: Data collection, Derived calculations, Structure summary
- **Version 1.4: 2023-12-13**
  Changes: Data collection, Database references, Refinement description, Structure summary
- **Version 2.0: 2024-05-01**
  Changes: Atomic model, Derived calculations
