ClinicalTrials.gov NCT04105166

Brief title	Gene Therapy for Pyruvate Kinase Deficiency (PKD)
Official title	Gene Therapy for Pyruvate Kinase Deficiency (PKD): A Phase I Clinical Trial to Evaluate the Safety of the Infusion of Autologous CD34+ Cells Transduced With a Lentiviral Vector Carrying the Codon Optimized Red Cell Pyruvate Kinase (coRPK) Gene in Adult and Pediatric Subjects With PKD
Overall status	COMPLETED
Last update posted	2025-09-05
Phase	PHASE1
Enrolment	4
Interventions	RP-L301
Sponsor	Rocket Pharmaceuticals Inc.
Brief summary	This is an open-label Phase I trial to evaluate the safety of a hematopoietic cell-based gene therapy for patients with Pyruvate Kinase Deficiency (PKD).
