NCBI Gene record 5313 · web page https://www.ncbi.nlm.nih.gov/gene/5313 · rendered from the NCBI E-utilities esummary JSON (https://eutils.ncbi.nlm.nih.gov/entrez/eutils/esummary.fcgi?db=gene&id=5313&retmode=json) retrieved on 22 October 2026.

PKLR pyruvate kinase L/R [Homo sapiens (human)]

Gene ID	5313
Symbol	PKLR
Name	pyruvate kinase L/R
Organism	Homo sapiens
Location	1q22
Annotation	NC_000001.11 (155289293..155308654, complement; 1-based, converted from the 0-based esummary values)
Exon count (as given by NCBI)	13
MIM	609712
Other aliases	CNSHA2, PK1, PKL, PKRL, RPK
Other designations	pyruvate kinase PKLR|R-type/L-type pyruvate kinase|pyruvate kinase 1|pyruvate kinase isozyme R/L|pyruvate kinase isozymes L/R|pyruvate kinase isozymes R/L|pyruvate kinase type L|pyruvate kinase, liver and RBC|pyruvate kinase, liver and blood cell|red cell/liver pyruvate kinase
Summary (RefSeq)	The protein encoded by this gene is a pyruvate kinase that catalyzes the transphosphorylation of phohsphoenolpyruvate into pyruvate and ATP, which is the rate-limiting step of glycolysis. Defects in this enzyme, due to gene mutations or genetic variations, are the common cause of chronic hereditary nonspherocytic hemolytic anemia (CNSHA or HNSHA). Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
