ClinVar

ClinVar Variation ID 1513

Conditions

Pyruvate kinase hyperactivity, not provided, Pyruvate kinase deficiency of red cells, See cases, Inborn genetic diseases, PKLR-related disorder

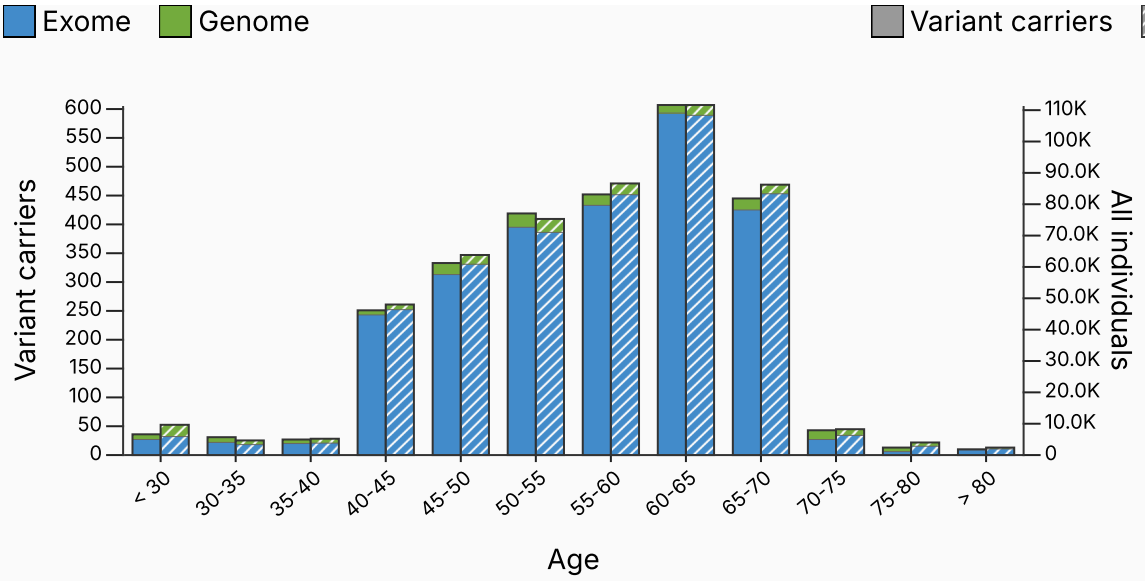

Germline classification Pathogenic/Likely pathogenic

Review status criteria provided, multiple submitters, no conflicts (2 stars)

Last evaluated March 20, 2026

See all 33 submissions or find more information on the ClinVar website. Data displayed here is from ClinVar's October 11, 2026 release.

Age Distribution

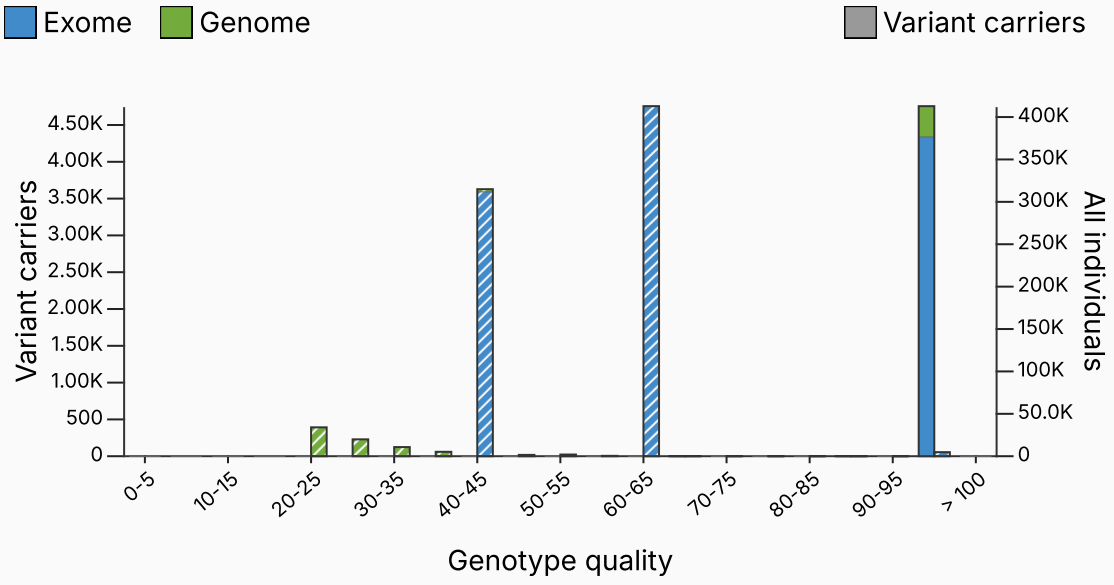

Include heterozygous variant carriers
Include homozygous variant carriers
Compare to all individuals

Sequencing types: Exome and Genome

Genotype Quality Metrics

Genotype quality | Depth | Allele balance for heterozygotes

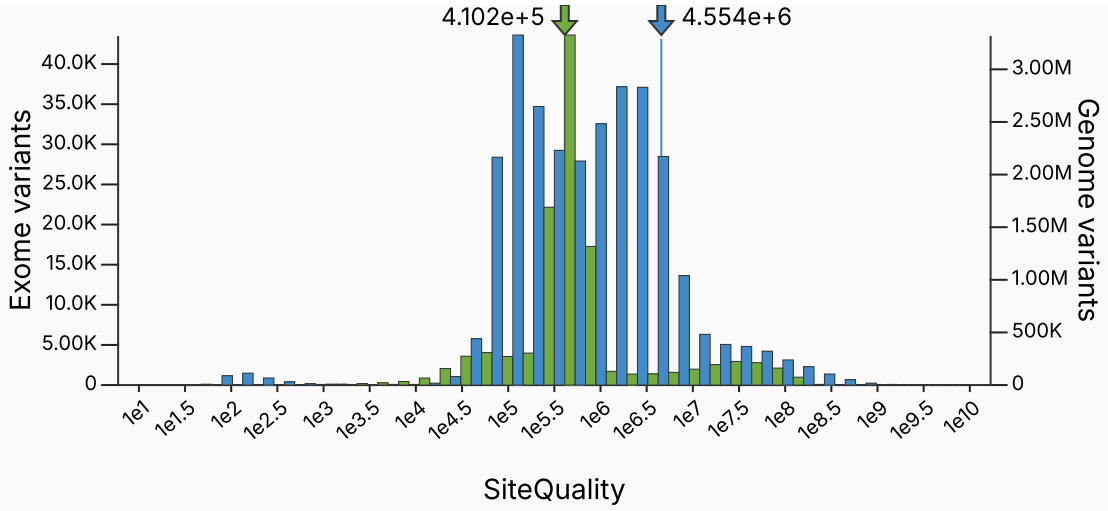

Compare to all individuals

Sequencing types: Exome and Genome

Site Quality Metrics

Metric distribution | All metric values

Metric: SiteQuality

Sequencing types: Exome and Genome

Value: 4.554e+6 (exome samples), 4.102e+5 (genome samples)

Site quality approximation for all variants with 0.002 <= AF < 0.005.

Note: These are site-level quality metrics, they may be unpredictable for multi-allelic sites.
